The Wolfson* Foundation

Project aims and outcomes

The example below is designed to help applicants express their anticipated outcomes in a format that will help us to consider potential impact and, if a grant is awarded, to evaluate the completed project.

Please use bullet points and concise, specific language. Applicants are asked to list up to three of the project's most significant anticipated outcomes (these can include the same outcome demonstrated in multiple ways). This example is intended to be a helpful illustration; it is not prescriptive.

Key Outcomes

By building an extension to our care home we hope to achieve the following outcomes:

> Provide a brief summary of the project

1. **Improved quality and range of services**

    The extension will allow us to improve our range of services by running a weekly drop-in service for at least 30 carers of people with dementia living in the community. This will be held in the newly created multipurpose room.

    > List each outcome. At least one of these should reflect the aims of our Health & Disability funding programme*

2. **Improved financial stability of the organisation**

    The extension includes new space where the new weekly drop-in service will be run. When this service is not being run we will lease out the use of the space to other community organisations, providing us with an estimated additional income of £15,000 per year.

    > Be specific about how each outcome will be achieved

3. **Improved career opportunities for our employees**

    Our care staff will have the opportunity to receive dementia specific care training which will help them progress in their careers. We plan to hold at least three training days in the first six months.

    > You can include your own outcomes as well
